- Value and Reference Book Listing

NOTE: We are pleased to accommodate your request for the Model 141 Slide Action Repeating Rifle information. The following documentation represents all information available on this model from the Remington Arms Co., Inc.

DO NOT MAKE CHANGES OR ALTERATIONS TO ANY PARTS OF A FIREARM. USE ONLY REMINGTON PARTS. NEVER MAKE AN ADJUSTMENT TO THE TRIGGER, OR CHANGE THE SHAPE OR SIZE OF THE SEAR, SEAR NOTCH, OR OTHER PARTS.

Ten Commandments of Shooting Safety

1. Always keep the muzzle pointed in a safe direction. 2. Firearms should be unloaded when not in use. 3. Don't rely on your gun's "safety". 4. Be sure of your target and what is beyond it. 5. Use correct ammunition. 6. If your gun fails to fire when the trigger is pulled, handle with care! The real of the second 7. Always wear eye and ear protection when shooting. 8. Be sure the barrel is clear of obstructions before shooting. 9. Do not alter or modify your gun, and have guns serviced regularly.

10. Learn the mechanical and handling characteristics of the firearm

you are using.

MODEL 141, SLIDE ACTION HIGH POWER RIFLE COMPONENT PARTS (See Illustrations)

In ordering parts, specify model, caliber, part number, part name and serial number of rifle. All parts marked with an asterisk (*) must be fitted at factory

INSTRUCTIONS FOR THE OPERATION AND CARE

This model is shipped from the factory taken down, as shown in Fig. 1.

Put Rifle Together:

See that take-down screw is unscrewed and pulled out to its stop; put

gaging ribs of guard with slots in rear of receiver, Fig. 2, grasp receiver and guard firmly to force them together, push take-down trigger guard into receiver by enscrew in and turn it tightly. Fig. 3.

Load Magazine:

Turn rifle bottom up. Insert end of bullet into space at front end of loading door, pushing magazine follower forward with cartridge until head enters magazine. The first cartridge will pass to rear under loading

magazine follower as before and push cartridge in until head will door. Insert next bullet against catch against notch in loading door, then put in more cartridges until five are in magazine.

FIGURE 3

Load Barrel From Magazine:

when fore end is moved fully forward. Rifle is now cocked and ready to fire. Another cartridge may now be inserted into magazine making six Press button in breech block, at the same time move fore end fully rearward, the first cartridge will now be moved upward and into barrel in the rifle.

Safety:

Safety is located at rear of trigger. Push from left to right until red band is covered.

Move safety from right to left until red band is exposed, indicating danger. Pull trigger to fire.

Repeaf:

fore end fully rearward to extract and eject empty shell, then close action. The mechanism is automatically unlocked by pulling the trigger. Pull

Single Load:

ridge may be loaded directly into the barrel. Fress unlocking button in breech block and open action, insert cartridge into barrel and close action When magazine is entirely empty and a single shot is desired, a cartrapidly to insure proper engagement of extractor claw over shell head.

Unload Rifle Without Firing:

When barrel and magazine are loaded and it is desired to unload the rifle completely, set safety on to lock trigger, press unlocking button, open action to eject cartridge from barrel, close action and repeat motion until magazine is empty. It is not necessary to fully close the action but only far enough to release next cartridge from cartridge stop which causes a slight click, then open action to eject cartridge.

Take-Down:

Grasp receiver and guard firmly to force them together, unscrew takedown screw and pull to its stop or nearly out of receiver, tip slightly to left to prevent screw from slipping back into receiver, slide guard with stock attached downward from receiver, Fig. 2.

Remove Breech Block:

It is advisable to remove breech block from receiver when cleaning Open and close action to cock firing pin. Turn rifle bottom up. tion, grasp rear end of breech block, through bore of barrel.--Pull takedown screw, out to its stop, open actilt it slightly upward and move fore end forward, then lift breech block barrel so that a clear view may be had from receiver. Fig. 4.

FIGURE 4

Replace Breech Block:

move fore end rearward to engage action bar with breech block while into receiver, being sure to have lug of breech block in recess of receiver, pressing ejector which protitides from rear end of breech block to cause action bar lock to clear action bar. Now move both breech block and Pull out take-down screw, move fore end forward, put breech block action bar together forward.

CARE OF RIFLE

tion will reduce the amount of care necessary to keep rifle in good Exclusive use of Remington KLEANBORE or Peters Rustless-Ammunicondition. The bore of barrel will not rust and will not need cleaning.

However, if old-fashioned ammunition is used, the bore should be cleaned as soon as possible after shooting to prevent powder residue

from causing nusting and pitting.

Oil. Repeat wiping and oiling again in a day or two. If rifle is to be Cleaning can be well done by scrubbing bore with a brass wire or a bristle-brush saturated with Remington Powder Solvent. Wipe clean and dry until no stain is removed by a clean cloth, then lubricate with Rem stored for a longer time, Remington Gun Grease is recommended.

If Remington Powder Solvent is not available, pour about one pint of boiling water through bore of barrel, using a small funnel to prevent. spilling upon fore end. Wipe clean and dry, then oil thoroughly.

Always wipe grease from bore before firing to prevent swelling or bursting barrel, because heavy grease causes so much resistance to rapid motion of bullet as to act like an obstruction.

wiped from inside the action and powdered graphite be used as a lubricant. At the end of a day's hunting wipe off exterior of rifle with an If rifle is used in Arctic or sub-zero temperature, all thin oil should be oily cloth.

Always insert wiping rod from breech end of barrel to prevent any wear of rifling at muzzle or cause inaccurate shooting.

SIGHT ADJUSTMENT

The purchaser of a rifle should test alignment of sights before startexpected. If big game is sought in open places where most shots are made at long range, the sights may be adjusted for such distances, and ing on a hunting trip, and adjust them for the particular kind of shooting aim be taken at a lower point on nearby objects. When hunting in ong shot be made by aiming at a high point on distant objects; or the sights may be quickly adjusted for the estimated distance by moving the wooded country, the sights may be adjusted for shorter ranges, and a rear sight step into the proper notch.

If, in targeting the rifle, the shots group too high, remove rear sight erly. If shots group too low, turn set screw to right. Place slot in screw step, and turn set screw in rear sight bar to left until shots group propcrosswise of barrel and replace step. One-half turn of set screw raises or owers point of impact approximately 2 inches at 100 yards.

Should the shots group to right, move rear sight to left, or front sight to right. If shots group to left, move rear sight to right, or front sight to left. The value of change per notch elevation of rear sight step varies with the load used. The shooter should familiarize himself with the effects of adjustment.

DISMOUNTING AND ASSEMBLING

See Sectional views for location of parts.

Breech Block:

sear, main spring and main spring plug. Remove firing pin. Remove sear extending outward, strike sear smartly with a screw driver handle to disengage sear and uncock firing pin. Move ejector to middle position lock with spring and plunger. Drive out sear pin, being careful to retain extractor by inserting small screw driver blade between rear end of ex-Open and close action to cock rifle. Take down the rifle. Press unlocking plunger to remove block, grasp breech block with bottom up and from block. Push out unlocking plunger. Drive out sear lock pin (the smaller one near bottom) crosswise from block and take out sear lock, spring and plunger. Drive out action bar lock pin and remove action bar ractor and extractor plunger, press plunger rearward to clear extractor, in left side and lift from slot in breech block. Push ejector rod forward push screw driver blade deeper and pry out extractor from breech block.

Assemble all these parts in reverse order, being careful to align all parts to show clear passage through before driving in pins.

Butt Plate:

Take out two screws.

Stock:

Unscrew stock bolt with long screw driver in deep hole under butt plate and pull stock off guard.

Guard Components:

Drive out carrier dog pin from right to left and lift out carrier dog and spring. Action bar supports may be lifted out. Drive out fixing pin catch pin. Lift out firing pin catch with spring and plunger.

Drive out trigger bushing and remove trigger, trigger spring with rod and cap. Safety may be pushed from guard.

Fore end:

Remove two fore end screws. Remove magazine plug screw, plug, magazine spring and follower. Slide action bar with magazine tube rear-

ward in receiver and fore end. Remove action bar cover screw and cover from front end of receiver. Tip barrel downward to remove cartridge stop. Pull action bar from rear of receiver.

Action Bar:

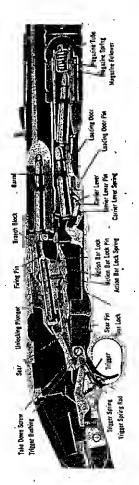

Remove magazine screw from bottom of action bar, unscrew tube. Drive out loading door pin and remove loading door with spring and plunger. Drive out carrier pin and remove carrier with carrier friction plunger and spring in side of carrier.

Carrier:

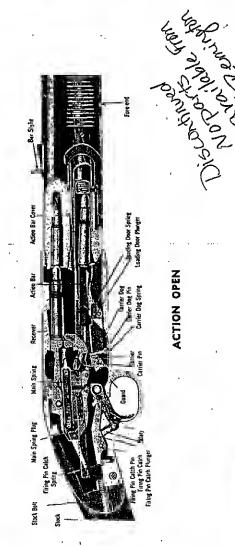

Remove carrier friction spring and plunger. Drive out carrier lever pin and remove carrier lever with spring and plunger.

Assembling:

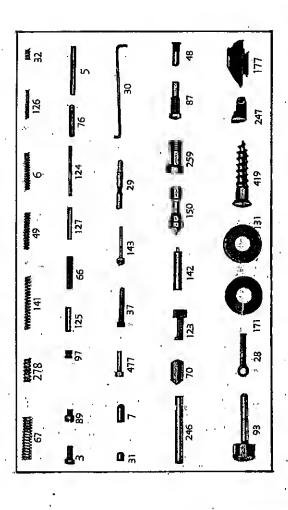

All parts in reverse order, being careful to align all holes to show a clear passage before putting in screws or pins.
